PREFACE

This is the third edition of the *Standard Geographical Classification* (SGC) which was first published in 1974. The SGC is a system for the identification and coding of geographical areas. The smallest unit of the classification is the municipality, or equivalent units in areas of Canada without municipal organization. There are 5,710 of these units. The seven-digit SGC code also identifies provinces and census divisions (counties, regional municipalities, regional districts and other equivalent units). The **main objective** of the classification is to make available a standard set of geographical codes which, when used in Statistics Canada and elsewhere, will facilitate the **linkage and exchange of data** among different files containing information about census divisions and subdivisions.

This publication consists of two volumes with an **effective date of January 1, 1981**. Volume I (Catalogue 12-567) includes a table of all units of the classification and appendices which list changes and revisions to the classification since 1976. Reference maps which show the location of all units appear in Volume IA. Volume II (Catalogue 12-568) identifies all unincorporated, but inhabited places in Canada. These are post offices, commercial shipping points, resource exploitation sites, and rural and urban communities. There are about 29,000 of these places. The volume lists them in numerical order of the SGC code, and in alphabetical order by province.

The present revision was carried out under the direction of Mr. Jean M. Léger and project manager Mr. George Haydu. Other members of the Standards Division contributing to this work were: Mesdames Claudette Bourque, Danielle Dontigny, Eileen Lennox and Mavis O'Neil and Messrs. Wayne Silver and Alan Tremblay. The valuable assistance of members of the Geography Staff and the Geocartographics Group, and of others both within and outside of Statistics Canada is gratefully acknowledged although responsibility for the form and content of the Manual rests with Statistics Canada.

PRÉFACE

Le présent manuel constitue la troisième édition de la *Classification géographique type* (CGT), dont la première publication remonte à 1974. La CGT est un système d'identification et de codage des unités géographiques. La plus petite unité de classification est la municipalité ou les unités équivalentes, dans les régions où il n'y a pas de structure municipale. Il existe 5,710 de ces unités. La classification à sept chiffres identifie également les provinces et les divisions du recensement (comtés, municipalités régionales et les autres unités équivalentes). L'**objectif principal** de cette classification est d'établir un ensemble type de codes géographiques qui, tant à Statistique Canada qu'ailleurs, facilitera le **rapprochement et l'échange de données** entre les différents fichiers portant sur les divisions et subdivisions de recensement.

Cette édition de la classification se compose de deux volumes et présente les **changements apportés jusqu'au 1^{er} janvier 1981 inclusivement**. Le premier volume (n° 12-567 au catalogue) comprend un tableau de toutes les unités de la classification et des appendices qui font état des changements et des révisions apportés à la classification de 1976. Les cartes de référence qui identifient l'emplacement de toutes les unités paraissent dans le volume IA. Le deuxième volume (n° 12-568 au catalogue) identifie tous les endroits habités, mais non incorporés au Canada, tels les bureaux de poste, les points d'envoi, les sites d'exploitation des ressources et les communautés urbaines et rurales. Il existe environ 29,000 endroits de ce genre. Ce volume les énumère en ordre numérique de code CGT de même qu'en ordre alphabétique par province.

Réalisé sous la direction de M. Jean M. Léger, et M. George Haydu comme chargé de projet, le présent ouvrage est l'oeuvre des membres suivants de la Division des normes: Mmes Claudette Bourque, Danielle Dontigny, Eileen Lennox et Mavis O'Neil et MM. Wayne Silver et Alan Tremblay. Nous sommes également redevables aux membres du Groupe de la géographie et du Groupe de la géocartographie, de même qu'aux autres personnes de l'intérieur comme de l'extérieur de Statistique Canada, de l'aide précieuse qu'elles nous ont accordée. Statistique Canada assume néanmoins la responsabilité de la forme et du contenu du présent manuel.

INTRODUCTION

The reference maps show the same census divisions (CD) and census subdivisions (CSD) as Tables 3 in both volumes. SGC codes are shown for subdivisions which also qualify as census consolidated subdivisions (CCS). The CCS concept is explained in **Section 10** of the **Introduction**, and the CCS units appear in **Volume II, Table 3**.

Due to the small scale of the maps it is not always possible to show the actual limits of the smaller municipalities. In these cases the limits are replaced by a point symbol.

A square symbol indicates the location of an Indian reserve. If sufficient space is available, the name is shown beside the symbol. Otherwise, the abbreviation R is employed. In a few cases several very small and contiguous Indian reserves are represented by one symbol and one R.

The lack of room on some maps precludes the use of the full official names which are shown in the tables. For example, Saint is abbreviated as St, and Division No. 1, Subd. C appears as Subd. C.

Census division boundaries and codes are shown in red on all maps except A and B. Nonetheless, the large size of some divisions and the interruption of their limits by water bodies may make it difficult to locate some CSDs in the correct census division. In these cases the user should refer to the CD portion (first two digits) of the SGC code for the CCS surrounding the subdivision.

Map scales limit the hydrographic features (blue) which can be shown. Therefore, fairly important rivers or lakes may not appear on a map with considerable census subdivisions detail, while another, less crowded map may show water features of local importance.

The spelling of water feature names and the use of English and French for these names follows the policy of the Department of Energy, Mines and Resources Canada for bilingual maps: names are shown in the official language of the province in which they occur. Usually the application of this principle is straightforward. Some examples are Fleuve Saint-Laurent, Lac Saint-Jean, Rideau River, Okanagan Lake, Hudson Bay, James Bay and Ungava Bay are shown in English only since they are legally part of the Northwest Territories.

INTRODUCTION

Les divisions de recensement (DR) et subdivisions de recensement (SDR) sur les cartes de référence sont celles que l'on retrouve aux tableaux 3 des deux volumes. Les codes CGT sont indiqués pour les subdivisions qui entrent aussi dans la catégorie des subdivisions de recensement unifiées (SRU). On explique le concept des SRU à la **section 10** de l'**introduction** tandis que les unités figurent au **tableau 3** du **volume II**.

Les cartes ayant été dessinées à une petite échelle, il n'est pas toujours possible d'indiquer les limites réelles des petites municipalités. En ces cas, les limites sont représentées par un point.

Un carré indique l'emplacement d'une réserve indienne. Si l'on a suffisamment d'espace, on inscrit le nom de la réserve à côté du symbole, autrement, on emploie l'abréviation R. Dans quelques cas, plusieurs réserves indiennes très petites et limitrophes sont représentées par un seul symbole et un R.

Le manque d'espace sur certaines cartes empêche d'imprimer en toutes lettres les noms officiels indiqués aux tableaux. Par exemple, Saint est abrégé en St et la Division No. 1, Subd. C figure sur la carte comme la Subd. C.

Les limites et les codes des divisions de recensement sont indiqués en rouge sur toutes les cartes, excepté A et B. Néanmoins, en raison de la grande superficie de certaines divisions de recensement et de l'interruption de leurs limites par des nappes d'eau naturelles, il sera peut-être difficile de cerner certaines SDR dans la bonne division de recensement; l'utilisateur doit alors se reporter à la partie "DR" (deux premiers chiffres) du code CGT attribué à la SRU entourant cette subdivision.

Les petites échelles utilisées limitent les détails hydrographiques (en bleu). Par conséquent, il peut arriver que des rivières ou des lacs assez importants ne figurent pas sur une carte détaillée de subdivisions de recensement, tandis qu'une autre moins surchargée pourra indiquer des détails hydrographiques d'importance locale.

L'orthographe et l'appellation des noms hydrographiques en anglais et en français respectent les directives du ministère Énergie, Mines et Ressources Canada relatives aux cartes bilingues: ces noms doivent figurer dans la langue officielle de la province où se trouve le cours d'eau. Habituellement, ce principe est assez simple à appliquer, par exemple: Fleuve Saint-Laurent, Lac Saint-Jean, Rideau River, Okanagan Lake, Hudson Bay, James Bay et Ungava Bay sont écrites en anglais seulement puisqu'elles appartiennent légalement aux Territoires du Nord-Ouest.

Features which form a boundary between Quebec and another province are named in both languages. Two examples are Chaleur Bay — Baie des Chaleurs, and the Ottawa River — Rivière des Outaouais.

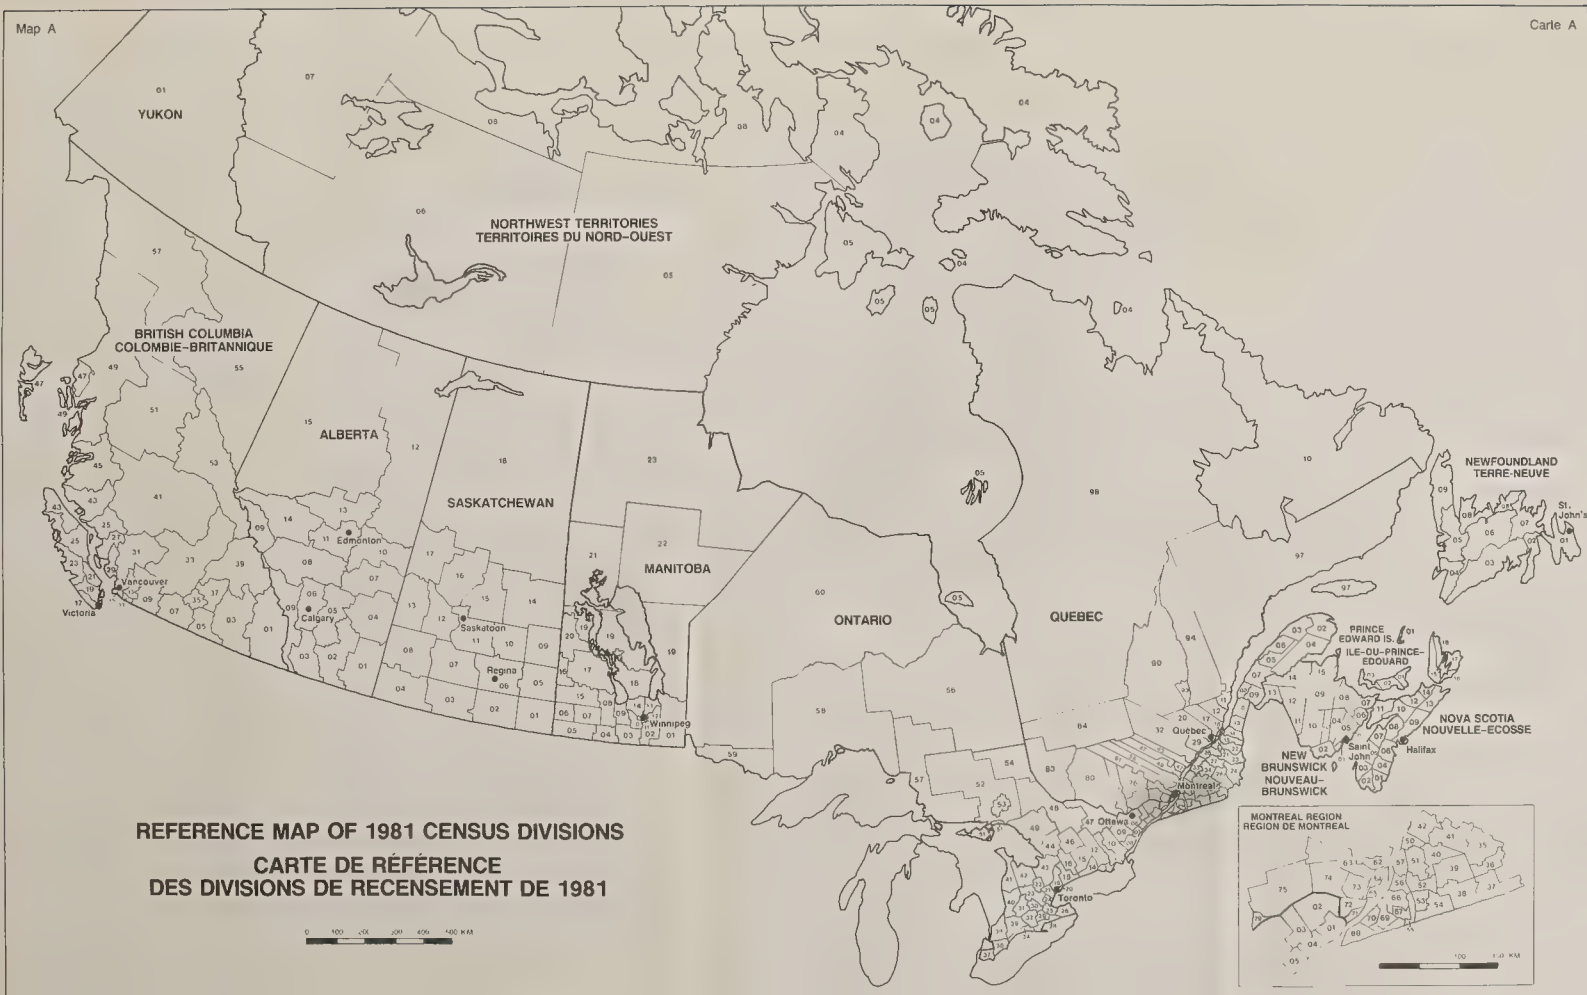

These maps were jointly sponsored by Standards Division, the Geography Staff, and Agriculture Division. The maps were produced by the Geocartographics Group and the Geography Staff.

The maps are also available as a separate publication, the 1981 Census Bulletin **Reference Maps — Census Divisions and Subdivisions**, Catalogue 99-907.

Les éléments hydrographiques qui constituent une limite entre le Québec et une autre province sont indiqués dans les deux langues officielles. Par exemple: Chaleur Bay — Baie des Chaleurs et Ottawa River — Rivière des Outaouais.

Ces cartes ont été conçues conjointement par la Division des normes, le Groupe de la géographie et la Division de l'agriculture. Les cartes ont été produites par le Groupe de la géocartographie et le Groupe de la géographie.

Un bulletin du recensement de 1981 contenant ces mêmes cartes est disponible séparément sous le titre **Cartes de référence — Divisions et subdivisions de recensement**, n^o 99-907 au catalogue.
